Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/673,751

Applicant(s)

DESAI, WEALTHY

Examiner

Clement B. Graham

Art Unit

3692

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period **will** apply and **will** expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply **will**, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 7/14/09.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-26,28-31,34-37 and 39-42 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-26,28-31,34-37 and 39-42 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1-26, 28-31, 34-37, 39-42 remained pending in this Application.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-26, 28-31, 34-37, 39-42, are rejected under 35 U.S.C. 103(a) as being unpatentable over Zoffel et al (Hereinafter Zoffel U.S Patent: 5, 274, 547) in view of Shacham U.S Pub: 2004/0117290.

As per claims 1-2, Zoffel discloses a method for providing customer sales information, the method comprising:

sales information associated with a customer from a member sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization using a terminal that is remote from the CSIPC server (Note abstract and see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) retrieving external credit rating information associated with the customer from an external credit rating agency (ECRA) system using the CSIPC server, wherein the ECRA system is not associated with the organization (Note abstract and see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) and sending the customer sales information from the CSIPC server to the terminal wherein the customer sales information is based on the external credit rating information (Note abstract and see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) and wherein the customer sales information is based on the external credit rating information (Note abstract and see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach sending a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, sales history information, customer/request history information, and product information (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include sending a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 3, Zoffel discloses wherein the terminal and the CSIPC server communicate via a public switched telephone network (PSTN) (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 4, Zoffel discloses wherein the terminal and the CSIPC server communicate via the Internet (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 5, Zoffel discloses wherein the customer sales information is sent from the CSIPC server to the terminal as a textual and/or graphical message (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 6, Zoffel discloses further comprising displaying the textual and/or graphical message on a display of the terminal (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 7, Zoffel discloses wherein:

a) the request includes a first customer identifier corresponding to the customer, the method further comprises associating the first customer identifier with a second customer identifier using the CSIPC server and the step of retrieving the external credit information includes providing the second customer identifier to the ECRA system (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 8, Zoffel discloses wherein the first customer identifier is a telephone number (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 9, Zoffel discloses wherein the customer sales information includes the name of the customer (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 10, Zoffel discloses wherein:

- a) the method further comprises retrieving internal customer information associated with the customer by the business organization from a database of the CSIPC server; and
- b) the customer sales information is also based on the internal customer information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 11, Zoffel discloses wherein the internal customer information includes payment history information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 12, Zoffel discloses further comprising determining an internal customer rating based on both the external credit rating and the internal customer information, wherein the customer sales information includes the internal customer rating (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 13, Zoffel discloses further comprising determining a sales term based on at least one of the external credit rating and the internal customer information, wherein the customer sales information includes the sales term (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 14, Zoffel discloses wherein the sales term includes at least one of a maximum allowed sale amount and a required down payment (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 15, Zoffel discloses wherein:

- a) the terminal is a wireless communication device and the request is sent to the CSIPC server using a wireless signal, the request includes a telephone number corresponding to the customer, the method further comprises associating the telephone number with a customer identifier using the CSIPC server (see column 4 lines 44-61 and

Art Unit: 3692

column 5 lines 30-52 and column 10 lines 40-64) the step of retrieving the external credit information includes providing the customer identifier to the ECRA system;

b) the method further comprises retrieving payment history information associated with the customer by the business organization from a database of the CSIPC server; and

c) the customer sales information is also based on the payment history information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 16, Zoffel discloses further comprising determining an internal customer rating based on both the external credit rating and the internal customer information, wherein the customer sales information includes the internal customer rating (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 17, Zoffel discloses further comprising determining a sales term based on at least one of the external credit rating and the internal customer information, wherein the customer sales information includes the sales term (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 18, Zoffel discloses wherein the sales term includes at least one of a maximum allowed sale amount and a required down payment (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 18, Zoffel discloses wherein the requester is a sales representative for a vendor of business directory advertisements, and further comprising offering to sell the customer a business directory advertisement (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 20, Zoffel discloses including authenticating the member of the business organization to confirm that the member is authorized to access the customer sales information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 21, Zoffel discloses a method for providing customer sales information, the method comprising:
sales information associated with a customer from a sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization using a wireless signal

from a wireless communication device that is remote from the CSIPC server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) retrieving customer rating information associated with the customer

using the CSIPC server and sending the customer sales information to the wireless communication device from the CSIPC server using a wireless signal wherein the customer sales information is based on the external credit rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach sending a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, **sales history information, customer/request history information, and product information** (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include sending a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 22, Zoffel discloses wherein the wireless communication device and the CSIPC server communicate via a public switched telephone network (PSTN) (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 23, Zoffel discloses wherein the wireless communication device and the CSIPC server communicate via the Internet (see column 1 para 0013 and 0015 and column 2 para 0035 and column 3 para 0040 and 0046 and column 6 claim 1 and 22).

As per claim 24, Zoffel discloses a method for providing customer sales information, the method comprising:

sales information from a sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization using a terminal that is remote from the CSIPC server, the request including a telephone number (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64)

a) retrieving customer rating information associated with the telephone number using the

Art Unit: 3692

Application/Control Number: 10/673,751

Page 8

Art Unit: 3692

CSIPC server; and sending the customer sales information to the terminal from

the CSIPC server, wherein the customer sales information is based on the customer rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach sending a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, **sales history information, customer/request history information**, and product **information** (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include sending a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 25, Zoffel discloses wherein the customer sales information includes the name of a customer associated with the telephone number in a database of the CSIPC server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 26, Zoffel discloses a method for providing customer sales information, the method comprising:
sales information associated with a customer from a requester to a customer sales information processing and communication (CSIPC) server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) retrieving customer rating information associated with the customer using the CSIPC server and automatically determining a sales term using the CSIPC server, wherein the sales term is based on the customer rating information and sending the sales term to the requester from the CSIPC server(see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach sending a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests . Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, sales history information, customer/request

Art Unit: 3692

Application/Control Number: 10/673,751

Page 9

Art Unit: 3692

history information, and product information (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include sending a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 27, Zoffel discloses wherein the sales term includes at least one of a maximum allowed sale amount and a required down payment (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 28, Zoffel discloses wherein the credit rating information includes an external credit rating from an external credit rating agency (ECRA) system (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 29, Zoffel discloses wherein:

a) the method further comprises retrieving internal customer information associated with the customer by a business organization associated with the CSIPC server from a database of the CSIPC server and the customer rating information includes the internal customer information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 30, Zoffel discloses wherein the internal customer information includes payment history information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 31, Zoffel discloses wherein the credit rating information further includes an external credit rating from an external credit rating agency (ECRA) system (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 34, Zoffel discloses a system for providing customer sales information, the system comprising:

- a) a customer sales information processing and communication (CSIPC) server associated with and under the control of a business organization and
- b) a terminal that is remote from the CSIPC server and operable sales information associated with a customer from a member sales representative of the business organization to

the CSIPC server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) wherein the CSIPC server is configured to:

c) receive the request from the terminal, retrieve external credit rating information associated with the customer from an external credit rating agency (ECRA) system, wherein the ECRA system is not associated with the organization(see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) and send the customer sales information to the terminal and wherein the customer sales information is based on the external credit rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach to send a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, sales history information, customer/request history information, and product information (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include to send a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 35, Zoffel discloses a system providing customer sales information, the system comprising:

a) a customer sales information processing and communication (CSIPC) server associated with a business organization, and a wireless communication device operable sales information associated with a customer from a member of the business organization to the CSIPC server using a wireless signal;

b) wherein the CSIPC server is configured to:

receive the request from the wireless communication device, retrieve customer rating information associated with the customer using the CSIPC server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) and send the customer sales

Art Unit: 3692

Application/Control Number: 10/673,751

Page 11

Art Unit: 3692

information to the wireless communication device using a wireless signal, wherein the customer sales information is based on the customer rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach to send a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, sales history information, customer/request history information, and product information (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include to send a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 36, Zoffel discloses a system for providing customer sales information, the system comprising:

a customer sales information processing and communication (CSIPC) server associated with a business organization, wherein the CSIPC server is configured to:

b) receive a request for customer sales information associated with a customer from a member of the business organization using a terminal that is remote from the CSIPC server, the request including a telephone number (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) retrieve customer rating information associated with the telephone number; and send the customer sales information to the terminal, wherein the customer sales information is based on the customer rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 37, Zoffel discloses a system for providing customer sales information, the system comprising:

a customer sales information processing and communication (CSIPC) server associated with and under the control of a business organization, wherein the CSIPC server is configured

Art Unit: 3692

Application/Control Number: 10/673,751**Page 12****Art Unit: 3692**

to: receive a request from a sales representative of the business organization for customer sales information associated with a customer (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) retrieve customer rating information associated with the customer, automatically determine a sales term, wherein the sales term is based on the customer rating information; and send the sales term to the sales representative; wherein the sales term includes at least one of a maximum allowed sale amount and a required down payment (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 39, Zoffel discloses a computer program product for providing customer sales information, the computer program product comprising:

a computer readable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising:

a) computer readable program code configured to send a request for customer sales information associated with a customer from a sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization using a terminal that is remote from the CSIPC server (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) (b) computer readable program code configured to retrieve external credit rating information associated with the customer from an external credit rating agency (ECRA) system using the CSIPC server, wherein the ECRA system is not associated with the organization (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) and (c) computer readable program code configured to send the customer sales information from the CSIPC server to the terminal wherein the customer sales information is based on the external credit rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 40, Zoffel discloses a computer program product for providing customer sales information, the computer program product comprising: a computer readable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising: a) computer readable program code configured sales

Art Unit: 3692

Application/Control Number: 10/673,751

Page 14

Art Unit: 3692

information associated with a customer from a sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization using a wireless signal from a wireless communication device that is remote from the CSIPC server(see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) (b) computer readable program code configured to retrieve customer rating information associated with the customer using the CSIPC server; and

d) c) computer readable program code configured to send the customer sales information to the wireless communication device from the CSIPC server using a wireless signal wherein the customer sales information is based on the external credit rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Zoffel fail to explicitly teach to send a request for customer.

However Shacham discloses as constituting an input to the evaluation and response system the enterprise data being utilized, as will be described below, to evaluate values for metrics according to which objects and in requests. Ultimately the request itself may be evaluated. The enterprise data is shown to include, for example, **sales history information, customer/request history information,** and product **information** (see column 3 para 0037 and column 17 para 0119).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Zoffel to include to send a request for customer taught by Shacham in order to create transaction quotes and/or evaluating and/or responding to transaction requests.

As per claim 41, Zoffel discloses a computer program product for providing customer sales information, the computer program product comprising:

a computer readable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising:

a) computer readable program code configured to receive a request for customer sales information sent from a member sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under

Art Unit: 3692

Application/Control Number: 10/673,751

Page 15

Art Unit: 3692

the control of the business organization using a terminal that is remote from the CSIPC server, the request including a telephone number (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) computer readable program code configured to retrieve customer rating information associated with the telephone number using the CSIPC server and computer readable program code configured to send the customer sales information to the terminal from the CSIPC server wherein the customer sales information is based on the external credit rating information (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

As per claim 42, Zoffel discloses a computer program product for providing customer sales information, the computer program product comprising:

a computer readable storage medium having computer readable program code embodied in the medium, the computer readable program code comprising:

- a) computer readable program code configured to receive a request for customer sales information associated with a customer sent from a sales representative of a business organization to a customer sales information processing and communication (CSIPC) server associated with and under the control of the business organization (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64) computer readable program code configured to retrieve customer rating information associated with the customer using the CSIPC server; and
- e) computer readable program code configured to automatically determine a sales term using the CSIPC server, wherein the sales term is based on the customer rating information; and computer readable program code configured to send the sales term to the requester sales representative from the CSIPC server wherein the sales term includes at least one of a maximum allowed sale amount and a required down payment (see column 4 lines 44-61 and column 5 lines 30-52 and column 10 lines 40-64).

Conclusion

RESPONSE TO ARGUMENTS

5. Applicant's arguments filed 7/14/09 has been fully considered but they are moot in view of new grounds of rejections.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clement B. Graham whose telephone number is 571-272-6795. The examiner can normally be reached on 7am to 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alexander Kalinowski can be reached on 571-272-6771. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

/Alexander Kalinowski/
Supervisory Patent Examiner, Art
Unit 3691
